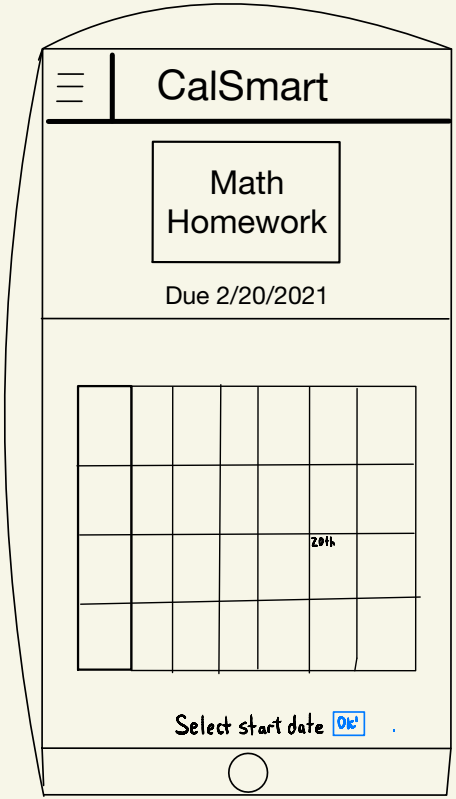
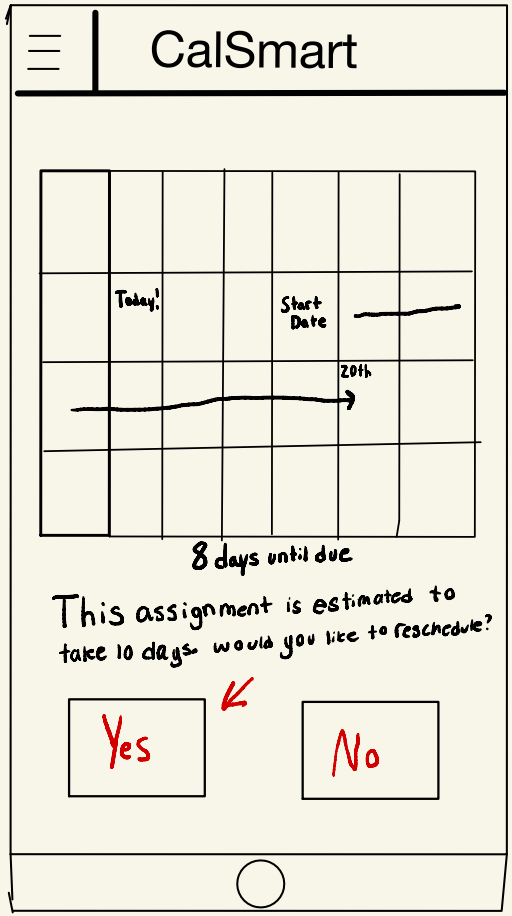
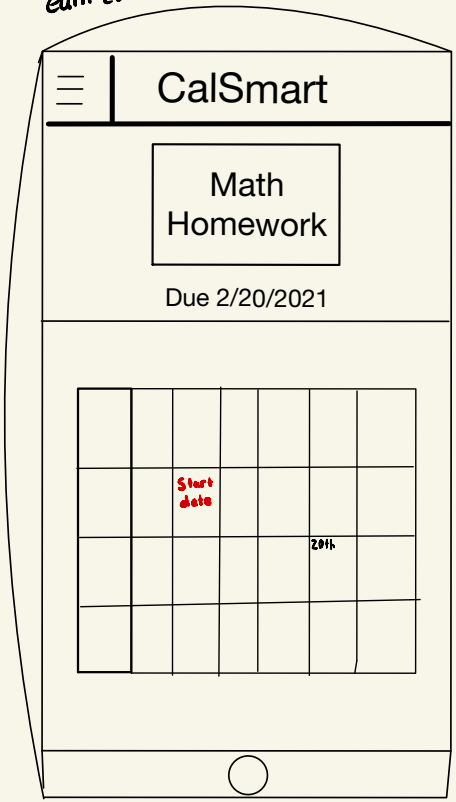
Schedule recomendations

This feature will allow students to start their assignments on time based on other data from previous years.



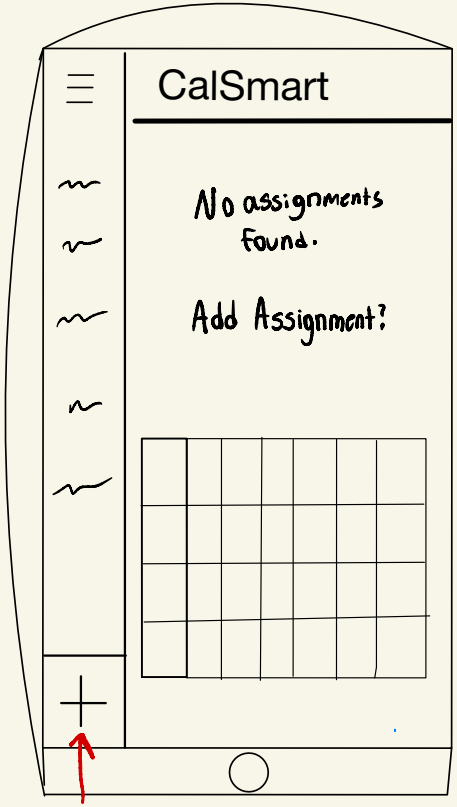


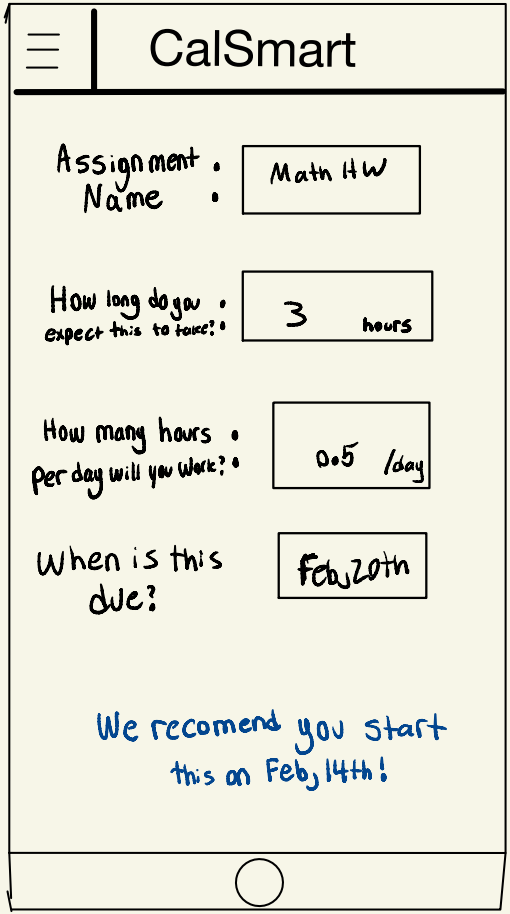
When the user selects yes, the start date is adjusted to the recomended length. If they select no, the professor will be notified that this student should not qualify for any extension. If yes, they earn coins.



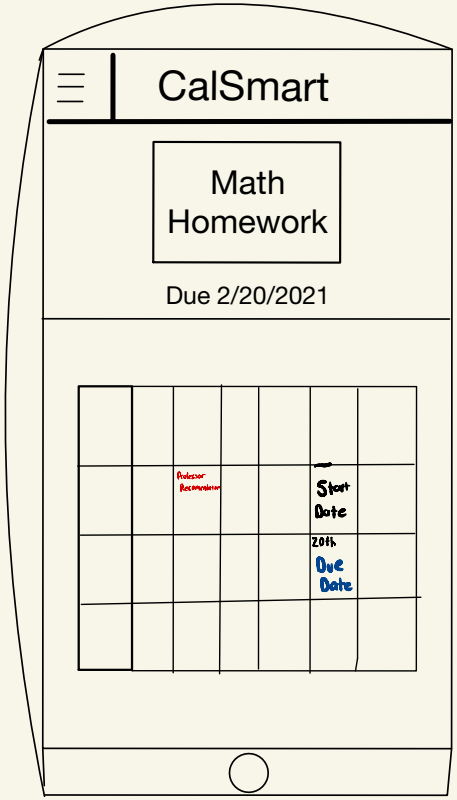
Assignment Addition

This feature will allow the user to add an assignment that Canvas did not sync automatically.



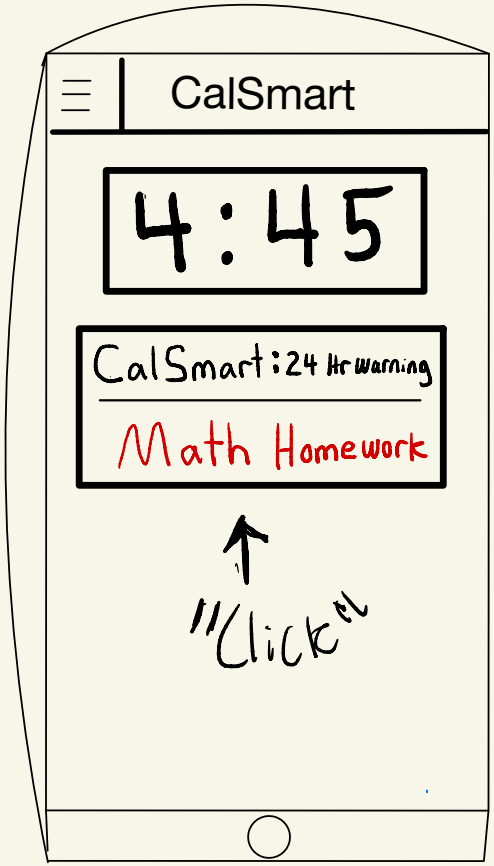


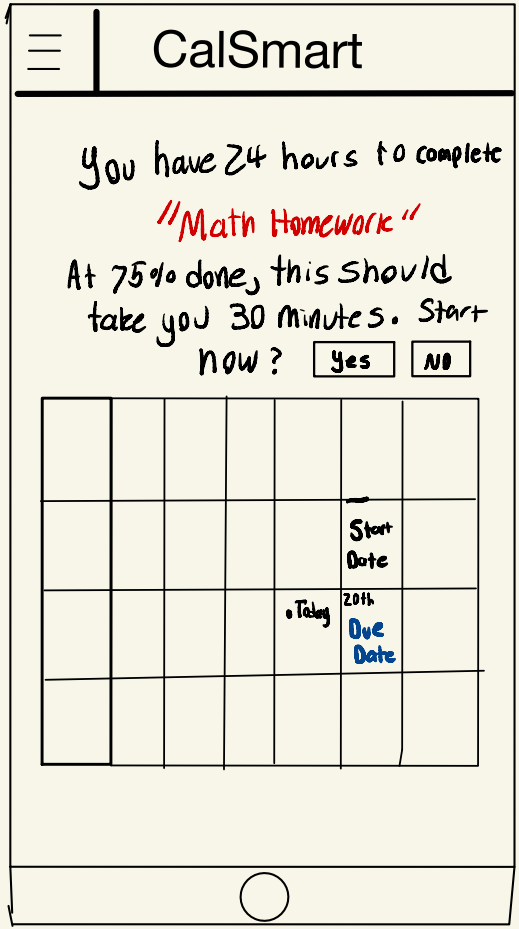
After a user adds an assignment and inputs basic questions, CalSmart will recomend a start date. Professors may opt to give their own recomendations which will also be listed.

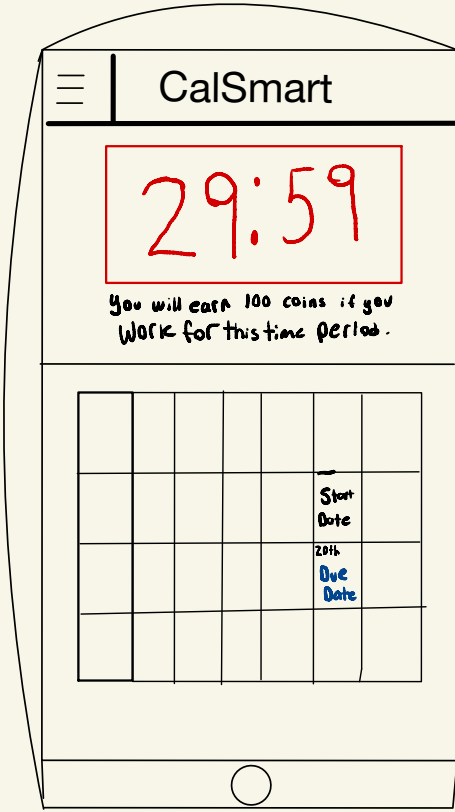


Due-Date Warnings

CalSmart will periodically notify the user if they have an upcoming assignment.







When the user clicks on a notification, they will be told an estimate on how long the assignment will take. They will recieve a prompt to either start a timer or ignore it. If the user works for the time, they recieve coins.
